

Material Safety Data Sheet Statement for Finished Products

Our finished products are formulated in house using EU guidelines and regulations for food supplements. Where required, we advise our customers when we believe that a requested level of vitamin or mineral exceeds recommended safe levels. Our customers can then choose whether they wish to follow our guidance. The company placing the product on the market is ultimately responsible for the formulation, as stated in Regulation (EU) No 1169/2011.

According to REACH regulation, mixtures in the final state, intended for the final user as food, food additive in foodstuffs, as flavouring in foodstuffs and as feeding stuffs, feed additive in feeding stuffs and animal nutrition are exempt. Due to this reason, finished products intended to be sold directly to consumers do not require MSDS.

In agreement with the regulations, MSDSs for CCL raw materials have been created and implement the requirements established by European Commission Regulation (EC) No 1907/2006 and 1772/2008. Therefore, CCL raw materials used in CCL finished products have MSDSs, which can be provided on request. In terms of COSHH assessment of the finished product, we advise to refers to the MSDS of the raw materials which provides information of the worst case scenario of handling 100% of each raw material.

To be used as per local legislation.
